DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Civic Auditorium in The Dalles occupies a quarter-block site (150x100 feet) at the northwest corner of E. Fourth and Federal Streets. The entire site is developed; the building abuts sidewalks and rear alley. Erected in 1921 in the Neo-Classical Revival Style from plans and drawings by the Portland firm of Houghtaling and Dougan, the building presents a pleasingly-proportioned 150 foot-long south-facing facade to E. Fourth Street. Opposing the buff-yellow pressed brick facade with its limestone trim are setback dwellings of modest size dating from the early years of the century. The parking strip in front of the yards on the opposite side of the street is shaded by lofty, mature elms and sycamores which are a remarkably apt foil to sedate civic architecture and are an integral part of the Auditorium's monumental effect.

The focal point of the Auditorium's facade is a central, columnated section in which eight strip pilasters are finished with limestone bases and capitals. The section is crowned by a limestone entablature, in which the words "Auditorium AD 1921" are carved in Roman Style, and a triangular pediment with limestone raking cornice. In the tympanum of the pediment is a nine-panel circular window with rowlock brick trim. Fenestration is trabeated. Typical openings are fitted with double-hung window sash with six over six or twelve over 12 lights. A wooden canopy added in the 1940s shelters doorways in the central bays of the columnated section.

The remainder of the front elevation and the side elevations are rendered flat, with the same face brick and punched window and door openings. The only ornamentation is a continuous limestone cornice at the roof, a rowlock course of bricks just below small, paired attic windows, and flat limestone lintels over the exits.

The rear, or alley, elevation is an irregular arrangement of windows in a stucco wall. The building is topped with a mansard roof up to the level of the pediments on the front elevation.

Improvements to the exterior of the building will be mainly to remove the added canopy and restore the windows to their original condition. The outside fire escape will be replaced with an interior stair, and telephone wires attached to the structure will be removed. The flat composition material on the sloping segment of the mansard roof will be covered with ribbed metal roof covering. In general, exterior work is planned to restore the building to its original design and condition.

The interior plan is divided in half, with the auditorium on the west, the gymnasium and the ballroom on the east. The major internal modification planned is the removal of the unsafe auditorium balcony (unsafe the day it was built, and now strengthened with steel rods at the front edge up to the roof structure) and re-opening of the foyer. The stage and proscenium arch of the auditorium are to remain much as they are now. The art-deco cascading glass cones and the wall mounted light fixtures will be removed and replaced in the remodeled auditorium to recall the earlier design.

One of the outstanding Period features of the interior is the chimney piece in the "Fireside Room" which is of Italianate design with a high mantel supported on brackets over two slender, twisted columns which rest on a raised hearth. The smoke chamber over the mantel is designed to carry the fireplace form up to the ceiling. A popular room for receptions, this space will be opened up with paneled folding doors on common wall with the gymnasium so the two spaces can flow together for large functions.

The gymnasium represents one of the important multiple uses of the building as the building was originally planned. It is used by over twenty different groups in The Dalles for various purposes, but especially for basketball. The roof beams are of riveted steel, reminiscent of steel construction of the turn of the century.

CONTINUATION SHEET

ITEM NUMBER 8 PAGE 1

P.J. Stadelman was mayor at the time of the dedication of the Civic Auditorium. The plans committee consisted of W.J. Seufert, chairman; H.S. Rice; Fred Thompson; A.W. Manchester; and B.O. Olinger. Others contributing to the planning were H.R. Fanche Dr. Thomas Cobreth, W.E. Walters, E.H. French, J.T. Rorick, John Van Dellen, Malcolm Moody, and F.W. Sims.

On its completion, the Civic Auditorium housed a short-lived swimming pool in the partial basement, gymnasium, reception room, ballroom and gallery, and an auditorium space which, with its balcony, provided seating for 800 people. The Dalles was the first important stop east of Portland for concertizers and road companies traveling by railroad. For example, Madame Matzenhauer, a leading contralto with the Metropolitan Opera Company accompanied by local pianist George Vause, provided the program for the Monday Musical Club at the Auditorium on April 30, 1927. Concerts of such distinction waned, however, as the popularity of motion pictures increased and, in time, the auditorium space came to be used more and more for the showing of movies in competition with downtown theaters. By the 1940s, a box office had been inserted into the foyer, and a marquee carrying the neon title "Civic" had been added to the facade.

Spurred recently by a citizens action group, the City has embraced a plan to update the Civic Auditorium for contemporary use. It is planned that the exterior will be restored and the marquee removed. In response to information gathered from questionnaires distributed to current users by the City Parks and Recreation Department, which is responsible for scheduling activities within the building, the gymnasium and the ballroom--with a kitchen addition--will be retained. The auditorium will be remodeled as a more intimate 600-seat playhouse; its condemned balcony will be removed and a lounge and meeting area will be developed in its place. Under the plan, the mezzanine is to be used for art exhibits and storage; restrooms are to be enlarged, and an elevator added. New corner stairwells will be added to provide access to the mezzanine at either end of the foyer, which, though subdivided in intervening years, will be reopened as a single formal space.

Chester A. Houghtaling (1882-1940), a native of Cleveland, Ohio, studied structural engineering at the Lewis Institute in Chicago and worked for the Chicago firm of Purdy and Henderson before migrating north and west to Saskatoon, Spokane, Twin Falls and Portland, where he opened an architectural office. Leigh H. Dougan (b. 1883), a native of Indiana, had studied architecture at the Armour Institute of Technology in Chicago and arrived in Portland in 1911. The pair formed a partnership in 1914 which lasted through 1924. Among the firm's best known works in Portland are the elaborately-decorated Second Renaissance Revival Elks Temple (Old), a National Register property; Washington High School; and the Medical Arts Building.
